PROBLEM STATEMENT

This analysis aims to provide insights for data-driven decision-making by focusing on:

- Customer Behavior – Grouping customers based on demographics, purchase habits, and preferences to better understand their behavior.
- Purchase Prediction – Predicting what customers are likely to buy next and when, based on their past purchases.
- Churn Risk – Identifying customers who may stop purchasing and suggesting strategies to retain them.

OBJECTIVES

The Objective focus is to drive business Growth:

- Insights into Purchase Behavior and Patterns.
- Analyze consumer purchasing patterns over time.
- Identify popular product categories and high-performing segments.
- Develop customer segmentation and personalization strategies.
- Consumer Shopping Trends: Insights into Purchase Behavior and Patterns.

Horizontal Bar Chart for Sales by Location

CONCLUSION

Subscription & Discounts Impact on Sales

- **Subscription does not improve sales.** Customers without subscriptions tend to purchase more than subscribed customers.
- **Discounts, promo codes, and subscriptions do not boost sales.** The store records higher sales from non-subscribed customers.

Customer Behavior & Buying Patterns

- **The color of Item sold has no significant impact on sales.** Customers buy clothing and other product categories regardless of color.

CONCLUSION

Customer Behavior & Buying Patterns

- **There is no correlation between age and sales.** Customers from various age groups purchase items in large quantities.
- **Male customers buy more than female customers.** Sales data indicates that male shoppers contribute a higher percentage of total purchases compared to female shoppers.

Seasonal Trends & High Sales Periods

- **Fall is the peak sales season.** The most frequent buyers are around **44 years old**, with the youngest customer being **18**, suggesting that the store does not sell products targeted at children or teenagers.

RECOMMENDATIONS

Improve Data Collection

✦ Include **quantity sold per transaction** to identify true best-selling products, not just those with high revenue.

Clarify Sales Data for Expensive Items

✦ **Hats** are the top-selling item in fall, but it's unclear if this is due to **high demand or high price**. More granular data is needed.

RECOMMENDATIONS

Sales by Age Group Analysis

✦ Correlation analysis shows **age does not significantly impact sales**, meaning marketing should focus on broader customer engagement.

Restock High-Demand Items in Fall

✦ **Fall has the highest sales volume**, identify the top-selling products and ensure they are well-stocked.

RECOMMENDATIONS

Target Male Customers with Personalized Offers

- ✦ **Male customers buy more**, the store should create **tailored promotions and recommendations** to increase engagement and sales.

THANK YOU
